

46U Rack

Node4 Racks are 46U high with 4 support columns.

Column spacing is standard 19inch (L-R) and 29inch (F-B).

The support columns have standard square holes for cage nuts. If you buy more than one rack together, we can leave the side panels off for easy inter-rack access.

Locks

All racks have secure locks front and back. Racks are kept locked at all times and keys are only given to Node4 support personnel. For a small fee, we can fit 3 digit combination locks to the front and rear of the rack.

Connectivity

Node4 have a wide range of connectivity options. Each rack has 4 patch ports installed by default for connection to the internet, your WES, IP-BVN or other connectivity. HSRP is available. Up to 32 patch ports are available per rack if necessary.

Cable Management

Racks come fitted with a cable management tray to keep power and data cables neat and tidy.

Additional cable trays can be fitted if necessary.

Mesh Panels

Our rack doors are designed to maximise airflow through your equipment to keep it cool.

Our Datacentre operates a hot/cold aisle set up to maximise air conditioning efficiency.

Power Supply

Standard power to a rack is 16A (3840 Watts of power), with 23 available IEC sockets. 32A feeds are available, along with secondary B feeds of 16A or 32A for full resilience. Power supply is 3 phase and backed up by N+1 UPS and generators.
